

# Schaffer Vs Tracked machines

1. **Lower fuel consumption** – more money kept in your pocket
2. **Lower operating costs** – tires available locally and cheap to replace. Track bearings and rollers are wear parts.
3. **Much easier to drive** – steering wheel and all operations on one joystick.
4. **Better visibility** – see all around the loader and more safety.
5. **Much faster travel between areas and loading speeds** – 20 km/hr-35 km/hr on bigger models
6. Built in Germany – **highest quality componentry on the market**, backed locally – BOSCH hydraulics, ZF axles, KUBOTA and DEUTZ engines
7. **Less ground disturbance** – articulated steering, wide floatation tires
8. **Quieter** – variable displacement hydrostatic, easier on your ears
9. **Comfortable** – oscillating articulation joint and long wheel base and seat suspension
10. **More reach** – load and unload trailer from 1 side
11. **Versatile** – operate most accessories on the market
