## **Schäffer presents the new telescopic wheeled loaders 2345 T and 2345 T SLT**

**Compact telescopic wheeled loaders are suitable as universally usable work machines for many agricultural businesses. The new 2300 series with its 3 t working weight is the perfect combination of strength, lifting height, reach and manoeuvrability.**

The much greater lifting height and reach in comparison with a normal yard loader opens up new perspectives when stacking bales, littering down or clearing the dung out. The dump height of the new models is just over 2.90 m, the lifting height at the tool pivot point is 3.73 m. This makes it possible to load many feed mixing vehicles powerfully and effectively.

Thanks to their articulated steering, the loaders are extremely manoeuvrable. Strenuous manual labour can be mechanised where front loader tractors are simply too big and too rigid. The 2345 T SLT will be particularly interesting for many farms. With a total height of less than 2.00 m this machine can manage even very low passageways. This extends the range of uses of this compact machine considerably.

No compromises are made with the lifting capacity either. The tipping load of up to 1.65 t is very respectable and makes powerful loading cycles possible despite the very compact machine measurements.

In terms of technical details, the most compact telescopic wheeled loaders by Schäffer are in no way inferior to the larger series. The telescopic arm is a completely new development. Just as with the larger models, wear-free and maintenance-free Ferro-Form sliding components have been used. The articulated/ swivel joint is just as maintenance-free as the oil-immersed multi-disc brake.

At the customer's request, the 2345 T is also available in a fast version with 28 km/h. Due to the many different options the customer can be sure that the new loaders can be adapted to his specific requirements.

**About Schäffer:**

Schäffer Maschinenfabrik GmbH is one of the leading manufacturers of compact yard, wheel and telescopic loaders used in agriculture, garden and landscape construction, and by the construction and other industries. From a particularly low compact yard loader to an articulated telescopic wheel loader with a working weight of eleven tons, Schäffer is one of the leading providers of articulated loaders in Europe. With a workforce of around 300 people, Schäffer is known as an innovative, flexible and international company with an exclusive range of products. Find out more at [www.schaeffer-lader.de](http://www.schaeffer-lader.de).
